Electronic Load Controller (ELC) is a controller used in small hydro power plant to control the frequency of generator by diverting excess power to dummy/ballast load. Power diversion to dummy load is done electronically through thyristor (SCRs) automatically without any moving

Abstract: Electronic Load Controllers (ELC) are used to balance the power at generator terminal to maintain the frequency of the system at nominal value.

Load controllers for micro hydro power plants have been an area of interest for researchers as well as for developers as it is of paramount importance to keep the frequency constant, which is not possible without controlling the load particularly in the case of micro hydro power plants.
