This book is the most up-to-date introduction to digital video and television. It is very suitable to university/college/arts students and video enthusiasts, by providing an accurate presentation, without too many mathematical/technical details. It covers all technologies related to video shooting/acquisition, editing, compression, optical storage, broadcasting and display. To this end, various video compression methods (MPEG-2, MPEG-4, HEVC) and broadcasting systems (ATSC, DVB, DTMB, ISDB) are overviewed. Novel trends in video streaming, webcasting and mobile video are presented. An overview of the latest trends in production, post-production and visual effects is presented for movie and TV content creation. Human perception of video and quality enhancement through video processing are detailed. Video analysis, description and archiving for fast video search are overviewed. Finally, novel trends in 3DTV and digital cinema are presented.
