| Summary Cellular
Respiration
Breaking Down
Energy Weebly

Cellular respiration is the process by which living cells break down glucose molecules and release energy. The process is similar to burning, although it doesn't

Krebs cycle, break down food molecules. The third pathway, oxidative phosphorylation, transfers the energy from the food molecules to ATP. Here are the basics of how cellular respiration works: During glycolysis, which

Get Free

Cellular

Respiration occurs in the cytoplasm of the cell, cells break glucose down into pyruvate, a three-carbon compound. After glycolysis, pyruvate is broken down into a two-carbon molecule called acetyl-coA.
