~~Natural disasters and hazards~~ — ~~SEG Wiki~~

Natural Hazards is devoted to original research work on all aspects of natural hazards, including the forecasting of catastrophic events, risk management, and the nature of precursors of natural and technological hazards. Although hazards can originate in different sources and systems, such as atmospheric, hydrologic, oceanographic, volcanologic, seismic, neotectonic, the environmental impacts are equally catastrophic.

~~Introduction To Natural Hazards | GCSE Geography Resources~~

Natural Hazards (and the resulting disasters) are the result of naturally occurring processes that have operated throughout Earth's history. Most hazardous processes are also Geologic Processes. Geologic processes affect every human on the Earth all of the time, but are most noticeable when they cause loss of life or property.

~~Natural Disasters & Assessing Hazards and Risk~~

Natural Hazards Data, Images and Education NCEI archives and assimilates tsunami, earthquake and volcano data to support research, planning, response and mitigation. Long-term data, including photographs, can be used to establish the history of natural hazard occurrences and help mitigate against future events.

Common Types of Natural Hazards Natural hazards can be classified into several broad categories: geological hazards, hydrological hazards, meteorological hazards, and biological hazards. Geological hazards are hazards driven by geological (i.e., Earth) processes, in particular, plate tectonics. This includes earthquakes and volcanic eruptions.
