Written 100 years ago, The Art Spirit by Robert Henri is most influential book for artists, and especially American artists. It still remains one of the best selling books on art and creativity, and it attracts new readers with every generation. Henri with the assistance of Margery Ryerson prepared this book from four decades of his lecture notes and hundreds of letters to students and friends. The Art Spirit deserves to be in every artist's library.Although Henri offers practical advice on painting, the book is not just about how to do art, but how to become an artist. For Henri, there was no greater human ambition than to be an artist. Although Henri's own life was not without challenges, especially financial ones, he does not dwell on his personal adversities. The book is a glorification of the artist's life, and how mundane difficulties pale to the joys of the artistic life. The Art Spirit provides insights into the mind of one of America's most influential artists and teachers, and the reader-artist comes away with an uplifting sense in what it means to be a part of the great "Brotherhood" of art. One of the problems of the original edition was that Henri was a frequent name-dropper. In this new edition, names and terms are annotated along with illustrations, making the read more informative and enjoyable. It is the best of The Art Spirit reprints.

Writing, according to Panayotis Tournikiotis, has always exerted a powerful influenceon architecture. Indeed, the study of modern architecture cannot be separated from a fascinationwith the texts that have tried to explain the idea of a new architecture in a new society. Duringthe last forty years, the question of the relationship of architecture to its history -- ofbuildings to books -- has been one of the most important themes in debates about the course ofmodern architecture.Tournikiotis argues that the history of modern architecture tends to be writtenfrom the present, projecting back onto the past our current concerns, so that the "beginning" of thestory really functions as a "representation" of its end. In this book the buildings are thequotations, while the texts are the structure.Tournikiotis focuses on a group of books by majorhistorians of the twentieth century: Nikolaus Pevsner, Emil Kaufmann, Sigfried Giedion, Bruno Zevi,Leonardo Benevolo, Henry-Russell Hitchcock, Reyner Banham, Peter Collins, and Manfredo Tafuri. Inexamining these writers' thoughts, he draws on concepts from critical theory, relating architectureto broader historical models.

This book examines a period which is far more than a prelude to the age of steel and concrete. The first half-century culminated in the bold iron and glass of the Crystal Palace. There follows the creation of the modern styles of the era based on traditions of the past, and finally, in the 20th century, Art Nouveau and the modern architects in their generations - Perret, Wright, Gropius, Corbusier, Mies van der Rohe and others in many parts of the world.

This introductory book, specifically for architects, focuses on the work of critic Homi K. Bhabha, who's work has been used as a means to analyse architectural practices in previously colonised contexts. This title reveals how his work contributes to architectural theory and the study of contemporary architectures in general, not only in colonial and postcolonial contexts.

I was the Fool-king of Soho and the number-one slag in the Groucho Club, the second drunkest member of the world's drunkest band. This was no disaster, though. It was a dream coming true.' For Alex James, music had always been a door to a more eventful life. But as bass player of Blur - one of the most successful British bands of all time - his journey was more exciting and extreme than he could ever have predicted. In Bit of a Blur he chronicles his journey from a slug-infested flat in Camberwell to a world of screaming fans and private jets - and his eventual search to find meaning and happiness (and, perhaps most importantly, the perfect cheese), in an increasingly surreal world.

This book is about understanding the value of environmental services in South Asia. It provides an overview of different environmental problems in South Asia and examines how economic valuation techniques can be used to assess these problems. It brings together multiple case studies on valuation undertaken by economists and environmental scientists from Bangladesh, India, Pakistan, Nepal and Sri Lanka under the aegis of the South Asian Network for Development and Environmental Economics (SANDEE). The book addresses the challenges of valuing environmental changes that are unique to developing countries. Each chapter starts with a description of an environmental problem and the valuation strategy used, followed by a discussion of estimation methods and results. It is designed to serve as a reference book for students, teachers, researchers, non-government organizations and practitioners of environmental valuation. Those interested in development and environmental economics, and natural resource management policies, will also find it useful.

This book takes a candid and insightful look at the rich history, construction and crew of the great ships.

Winner of the ACSA/AIA Housing Design Education Award! There is an increased interest among architects, urban specialists and design professionals to contribute to solve "the housing problem" in developing countries. The Invisible Houses takes us on a journey through the slums and informal settlements of South Africa, India, Colombia, Honduras, El Salvador, Cuba, Haiti and many other countries of the Global South, revealing the challenges of, and opportunities for, improving the fate of millions of poor families. Stressing the limitations of current approaches to housing development, Gonzalo Lizarralde examines the short-, mid- and long-term consequences of housing intervention. The book covers -- among others -- the issues of planning, design, infrastructure and project management. It explains the different variables that need to be addressed and the causes of common failures and mistakes, while outlining successful strategies based on embracing a sustained engagement with the complexity of processes that are generally invisible.

Illustrating his points with many references to actual projects, John Zeisel explains, in non-technical language, the integration of social science research and design. The book provides a provocative text for students in all the fields related to environm
