Story Description: Light

from a Distant Star is a gripping coming-of-age story with a brutal

murder at its heart and a heroine as unforgettable as Harper Lee's "Scout."

It is early summer and Nellie Peck is on the cusp of adolescence - gangly, awkward, full of questions, but keenly observant and wiser than many of the adults

The flux of photons  
from a star a given  
distance away is  
proportional to the  
output of the star  
divided by the distance  
squared. photons per  
mm<sup>2</sup> per second at the  
observer = photons

# Where To Download Light

emitted by the star per  
second / (distance  
between the star and  
observer in mm)<sup>2</sup>

Betelgeuse is 650  
lightyears away  
( $6.15 \times 10^{21}$  mm), and  
puts out  $4.15 \times 10^{31}$   
watts, which, if 20% of  
that is visible light  
would be  $2.9 \times 10^{49}$   
photons per second, so  
where we are there is a  
photon flux of 770,000
