Find the alternator's terminals. There are many types of Lucas alternators: some have two terminals while others have up to four. If you have two terminals, one is positive, the other negative, and they are labelled or coloured. If you have three terminals, one is negative, and two are positive. If there's a fourth terminal, it will be smaller than the others and connects a wire that goes to your dashboard to indicate the alternator is operating correctly.

Connect the red wire to the alternator case and touch the black wire to each of the large terminals in turn. If both large terminals give a buzz or a similar reading (not the "I" for infinity) both are output terminals, otherwise you can only use the one that buzzed or gave a reading – probably the upper one.

CHARGING SYSTEM – ALTERNATOR

Disconnect the two wires, noting which way they are fitted, & using another piece of wire, join the two terminals together and connect the pair to one side of a Voltmeter or a 12V 21W indicator bulb. The other side of that goes to earth. Start the bike & give it a good rev.
