PI (the Greek letter) is often used in many different equations. PI is used in macroeconomics by some writers to symbolize the rate of inflation, or other cases where a variable needs to be inserted. PI is used because the writer doesn't want to use X or THETA or RHO or ... it's just a placeholder for a variable.

Profitability index, also known as profit investment ratio and value investment ratio, is the ratio of payoff to investment of a proposed project. It is a useful tool for ranking projects because it allows you to quantify the amount of value created per unit of investment. Under capital rationing, PI method is suitable because PI method indicates relative figure i.e. ratio instead of absolute figure. The ratio is calculated as follows: Profitability index = PV of future cash flows / Initial invest

Macroeconomics is 'non-experimental': like, e.g., history, macro-economics cannot conduct controlled scientific experiments (people would complain about such experiments, and with a good reason) and focuses on pure observation. Because historical episodes allow diverse interpretations, many conclusions of macroeconomics are not coercive.
