Focus on the clinically relevant aspects of anatomy and bridge normal anatomy to common clinical conditions with Netter's Clinical Anatomy, 4th Edition. This easy-to-read, visually stunning text features nearly 600 superb Netter-style illustrations that provide essential descriptions of anatomy, embryology, and pathology to help you understand their clinical relevance. Authored by John Hansen, PhD, an Honored Member of the American Association of Clinical Anatomists, this book is an ideal anatomy reference for students who want to make the most of their study time or need a concise review of clinical anatomy.

This Health Metrics Network assessment tool is intended to achieve more than a assessment of the strengths and weaknesses of the elements and operations of a national HIS. The mere process of conducting the assessment reaches and engages all stakeholders in the system. In order to assist countries in this key activity Health Metrics Network has developed this assessment tool which describes in detail how to undertake a first baseline assessment.

A timely work describing how localized hospital-based health technology assessment (HB-HTA) complements general, 'arms-length' HTA agency efforts, and what has been the collective global impact of HB-HTA across the globe. While HB-HTA has gained significant momentum over the past few years, expertise in the field, and information on the operation and organization of HB-HTA, has been scattered. This book serves to bring this information together to inform those who are currently working in the field of HTA at the hospital, regional, national or global level. In addition, this book is intended for decision-makers and policy-makers with a stake in determining the uptake and decommissioning of new and established technologies in the hospital setting. HTA has traditionally been performed at the National/Regional level by HTA Agencies, typically linked to governments. Yet hospitals are the main entry door for most health technologies (HTs). Hospital decision-makers must undertake multiple high stakes investment and disinvestment decisions annually for innovative HTs, usually without adequate information. Despite the existence of arms-length HTA Agencies, inadequate information is available to hospital decision-makers either because relevant HTA reports are not yet released at the time of entry of new technologies to the field, or because even when the report exists, the information contained is insufficient to clarify the contextualized informational needs of hospital decision makers. Therefore, there has recently been a rising trend toward hospital-based HTA units and programs. These units/programs complement the work of National/Regional HTA Agencies by providing the key and relevant evidence needed by hospital decision makers in their specific hospital context, and within required decision-making timelines. The emergence of HB-HTA is creating a comprehensive HTA ecosystem across health care levels, which creates better bridges for knowledge translation through relevance and timeliness.

The demand for academic coursework and corporate training programs using the Internet and computer-mediated communication networks increases daily. The development and implementation of these new programs requires that traditional teaching techniques and course work be significantly reworked. This handbook consists of 20 chapters authored by experts in the field of teaching in the online environment to adult students enrolled in graduate university degree programs, corporate training programs, and continuing education courses. The book is organized to first lay a conceptual and theoretical foundation for implementing any online learning program. Topics such as psychological and group dynamics, ethical issues, and curriculum design are covered in this section. Following the establishment of this essential framework are separate sections devoted to the practical issues specific to developing a program in either an academic or corporate environment. Whether building an online learning program from the ground up or making adjustments to improve the effectiveness of an existing program, this book is an invaluable resource.--From Amazon.

In the spring of 1860, Fabrizio, the charismatic Prince of Salina, still rules over thousands of acres and hundreds of people, including his own numerous family, in mingled splendour and squalor. Then comes Garibaldi's landing in Sicily and the Prince must decide whether to resist the forces of change or come to terms with them.

This contributed book covers all aspects concerning the clinical scenario of breast cancer in young women, providing physicians with the latest information on the topic. Young women are a special subset of patients whose care requires dedicated expertise. The book, written and edited by internationally recognized experts who have been directly involved in the international consensus guidelines for breast cancer in young women, pays particular attention to how the disease and its planned treatment can be effectively communicated to young patients. Highly informative and carefully structured, it provides both theoretical and practice-oriented insight for practitioners and professionals involved in the different phases of treatment, from diagnosis to intervention, to follow-up - without neglecting the important role played by prevention.

This book discusses the role of nutrients and vitamins in cancer prevention and treatment. Basic and clinical scientists from different regions of the world have contributed to this volume. The incidence of cancer is on the rise internationally and many of these cancers appear to be attributable to diet, lifestyle, and environmentally related factors. In recent years, many cancer causing substances and cancer protective agents which are associated with these factors have been identified and extensively tested in experimental models. This work also focuses on newer conceptual ideas that have emerged regarding the functions of nutrients on cellular and molecular levels.

MALT Lymphomas is a multidisciplinary book that covers all the aspects of MALT lymphomas, from the molecular biology, the aetiology and the pathology, to all the possible therapeutic approaches. Extranodal marginal zone B cell lymphoma of MALT type (MALT lymphoma) is one of the lymphoma subtypes that has allowed us some of the most interesting steps forward in the understanding and treatment of human cancers. The eight contributions have been written by a team of international experts and represent an essential reading for oncologists, haematologists, gastroenterologists, pathologists and all the other physicians and researchers involved in cancer. The book is also supported by a series of figures illustrating the histology and the clinical features and the treatment.
