all_bmw_alignment_info

Front wheel alignment consists of four factors: Camber is the angle at which the roadwheels are set from the vertical when viewed from the front or rear of the vehicle. Positive camber is the angle (in degrees) that the wheels are tilted outwards at the top from the vertical.

Wheel alignment and steering angles - general information ...

The following alignment speci fi cations represent the industry standard established for a mid point target value on wheel alignment. Setting alignment for the target value mini- mizes inherent variations in measurement systems and provides optimum tire life. All values given in the table are for unladen vehicles with no trailer connected.

Alignment Speci f ications and Procedures

The term "wheel alignment" refers to all the elements that make your car go straight. It involves three main measurements: caster, camber, and toe. If you hit a massive pothole and bump your suspension out of alignment, the carefully calculated specifications to which the components were set are no longer in effect. To realign your car, a technician will uses standard measurements as targets for adjustment.

Understanding Wheel Alignment - LiveAbout

Wheel alignment specifications will usually provide the measurements for toe-out on turns. They will give an angle for the inside wheel and the outside wheel such as 20 for the inside wheel and 18 for the outside wheel.
